Download Photoshop CS6 Installation The download consists of a very large archive file that will automatically install to the default location in the application's Settings panel under "Photoshop CS6." We

---

recommend downloading the file to a solid-state disk, such as an external hard drive, rather than using a standard hard drive, due to the large file size. Photoshop CS6 requires 8 GB of disk space. It should also be noted that Photoshop CS6 uses a substantial amount of disk space. A simple image of a cat taken using a standard web-camera, for example, can use up to a half-gigabyte of storage depending on the photo. As for the Installation window, the default path shown is

C:\Program Files

---

(x86)\Adobe\Photoshop CS6.  
This can be changed in the Preferences options in the Options menu. To install Photoshop CS6, right-click on the file that was downloaded and select "Properties" to change the installation location. It is recommended that you change the Installation Location to a different location such as your Documents folder. Once the file is completed installing, restart your computer and it should automatically launch Photoshop. General Setup The

---

Photoshop interface has been simplified for beginners and has a cleaner look, with modern UI conventions from Microsoft Windows. Since Photoshop now takes advantage of similar interface design patterns to Windows 8, many elements in Photoshop feel like Windows 8 apps. Elements such as the Windows 8 System Tray, Windows 8 "Metro" Start Screen and Windows 8's drop down menus feel quite similar to Photoshop. Many of these changes are in the background, though, as

---

Adobe maintains its unique name and interface. The addition of what Adobe calls a "Photoshop Center" (shown in Figure 1) is the most obvious of these changes. Figure 1.

Photoshop's Central menu allows users to quickly access any of Photoshop's menus and settings features. After installing Photoshop, users will be presented with a welcome screen called the "Photoshop CS6 Welcome" (Figure 2). This can be closed by selecting Photoshop CS6 Welcome from the File menu. Figure 2.

---

Photoshop CS6 includes a welcome screen called the "Photoshop CS6 Welcome." The Photoshop CS6 Welcome screen shows the date the user last opened Photoshop CS6, as well as any recent activity. The most likely reason for the activity is a crash or error in Photoshop. Notably, Photoshop

Q: How can I login to a git repository on the command line? I'm SSHing into a remote Git repository with a Git URL. I'd like to clone it to my local system and access the repository that way. However, when I try and clone the repository, I get: \$ git clone -b my\_feature\_branch git@stash.com:myrepo/myrepo.git Cloning into 'myrepo'... Permission denied (publickey). What am I doing wrong here? I've ensured that I can clone the repository

---

successfully from other machines. (As a note, this is a private stash repository.) A: A better way would be to make an SSH public key. Here are the steps to make a public/private key pair. Generate a public and a private key `ssh-keygen -t rsa` When prompted, type `yes` to create the keys. This creates a public/private key pair. Open your private key file with PuTTYgen (I don't have a linux machine to test with). You can name the key something else if you want. If prompted, type

---

yes. It asks for your passphrase. Publish your public key to your repository. For example, if you want to publish the public key for your ssh key, then just copy and paste the contents of your public key to the remote repository. There's a SSH link on the site that has a list of all the places you should add the public key. Q: Call recursively a function in VBA Excel I have a function that I need to call recursively. For example, I have a code with the function: Public Function math(chA As Integer,

---

chB As Integer) As Integer chA  
= 7 chB = 21 math =  
Int(Math.Sqrt(chA \* chB) \*  
40/100) End Function This  
function calculates the sum of  
the powers of 7 and 21, but I  
can't find a way to call it  
recursively. This is what I tried:  
Public Function math(chA As  
Integer, chB

Q: How to reference a row for a cell in another sheet in excel? I have a working program that searches for item codes on a

---

table, then returns the price from another worksheet. It seems as though after performing the search and copying the new values from sheet "Prices" to the current selected cell on the table, Excel does not know where I've moved the new row to and it updates the data in the same row for every cell. This is the code I have written so far: Sub search() Dim lastrow As Long, lastrowprice As Long Sheets("Prices").Activate lastrow = Sheets("Totals").Range("A:A").End(xlDown).Row
